

CREATE 3D VIDEOS – HERE'S HOW!

Follow these steps to create 3D videos:

Start Movie Studio Platinum and drag & drop your 3D videos from the Media Pool to import it into the project window. This will create two video objects on track 1 and track 2 respectively.

Select the two video objects by dragging a rectangle over both objects with the mouse.

Open the effects in the Media Pool and select the "Properties" option in the "Stereo3D" category. Select the 3D mode you want to use. If you don't know which setting you should choose, try the "Stereo3D pair (left image first)" option first.

Put on your 3D glasses, click on the menu icon in the upper left corner of the preview monitor and switch the preview monitor to "Anaglyph display".

Verify that you have selected the correct 3D option and change the setting, if necessary. If the video still needs correction, use the options for adjust provided in the "Stereo3D alignment" dialog until you are satisfied with the picture.

Now, you can edit your Stereo3D video as desired and add music, voice-over commentaries or 3D subtitles. To insert normal 2D titles and overlay objects into the 3D picture, select the option "Stereo depth for 2D object".

Finally, go to "File" > "Export movie" and select an export format in the sub-menu (e.g. MP4) to export a 3D video file in different formats. Alternatively, use the buttons in the top right hand corner of the program interface to burn your 3D video to DVD, transfer to a social media platform or copy to a smartphone.
