

These instructions are mainly for using two cameras sync'd together. However, I will also include using a single camera like a Fuji that saves MPO format.

There are several similar ways to process multiple photos. I am going to explain my procedure.

- 1) **CREATE FOLDERS** (to create folders see instructions at the end of this article) I create a main folder (ie. Boat Trip). Inside that folder I will create 4 additional folders (Boat Trip Original, Boat Trip LEFT, Boat Trip RIGHT, Boat Trip ANAGLYPH). *If you are using a single stereo photo (MPO file from Fuji) instead of a R and L folder, just create one folder called for example, Boat Trip Originals.*
- 2) **TRANSFER FROM CAMERA** I put the images from the LEFT camera into the folder with the LEFT name and do the same for the RIGHT images. I use 2 digital cameras on a bar where the left camera is upside down so that the lenses can be closer together.
- 3) **RENAME WITH \_L AND \_R** I choose **File/MultiRename**, click additional letters and add L, then rename **All**, and click OK to start. I do the same for the RIGHT images adding R to the name.
- 4) **ROTATE UPSIDE DOWN IMAGES** Choose **File/Loss Join/Decompose/Rotation**, then go to the LEFT folder, choose 180 rotation, I choose the RIGHT folder for destination, and click YES to start. If you rotate them in the same folder, you will have to ok each to overwrite; putting it in a different folder you only have to say start.
- 5) **CHECK TO MATCH NUMBERS** I open the RIGHT folder (windows explore) and view thumbnails. Eliminate any misfires on a camera. Probably your numbers will not match, due to a misfire. Look at the thumbnails and match the R and L pair and rename them either with a name or the matching number.
- 6) **CREATE ANAGLYPHS** Choose **File/Multi Conversion**  
go to the RIGHT folder now with both R and L images,  
input file = (independent L/R),  
Output = color anaglyph,  
Auto align,  
Auto crop,  
output folder = Boat Trip Anaglyph folder,  
prefix ANA ,  
convert ALL, yes to start
- 7) **DONE** – then view the anaglyphs, select those you want to delete and those you want to better align/set window/etc.

#### **For MPO files,**

Put the images into the Boat Trip Original folder and create one additional folder Boat Trip Anaglyphs, skip steps 2 – 5 and then at step 6, choose side by side instead of L/R, with all the other settings the same, and begin.

**TO CREATE FOLDERS** There are several ways to create folders, this is just one way, the way I create folders. Instructions are for XP and Windows 7

### **ON XP COMPUTERS**

- 1) On **START** (*RIGHT CLICK*) and **GO TO EXPLORE** (*LEFT CLICK*)
- 2) Go to **MY DOCUMENTS** (*LEFT CLICK*)
- 3) Go to **MY PICTURES** on left side (*LEFT CLICK*)
- 4) Go to the right side of screen, (*LEFT CLICK*) in empty space
- 5) Then in empty space (*RIGHT CLICK*)
- 6) go to **NEW** (in a few seconds a popup will appear – without clicking)
- 7) On **FOLDER** (*LEFT CLICK*) and type a name.

To put additional folders inside the new folder, step 2 select the new folder and continue with instruction.

### **ON WINDOWS 7 COMPUTERS**

- 1) On **START** (*RIGHT CLICK*) and **EXPLORER** (*LEFT CLICK*)
- 2) About 12 lines down, **LOCAL DISK (C:)** (*LEFT CLICK*)
- 3) About 9 lines down, **USERS** (*LEFT CLICK*)
- 4) Go to **(YOUR NAME)** (*LEFT CLICK 2X*)
- 5) Go to **(MY PICTURES)** (*LEFT CLICK 2X*)
- 6) Go to the right side of screen, (*LEFT CLICK*) in empty space
- 7) Then in empty space (*RIGHT CLICK*)
- 8) go to **NEW** (in a few seconds a popup will appear – without clicking)
- 9) On **FOLDER** (*LEFT CLICK*) and type a name.

To put additional folders inside the new folder, step 2 select the new folder and continue with instruction.
